## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

It is noted that the claims of the instant application have been determined to include linking claims. Claim 1 link(s) inventions 1-2, as set forth below. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claim 1. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/ are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Group I, claim(s) 2-12, 14, 16, 18-24, as specifically drawn to methods of determining prognosis comprising detecting MN/CA9 gene expression products, wherein said gene expression products are MN/CA9 polypeptides.

Group II, claim(s) 2-7, 9-11, 14, 19-24, as specifically drawn to methods of determining prognosis comprising detecting MN/CA9 gene expression products, wherein said gene expression products are MN/CA9 polynucleotides.

The inventions listed as groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking groups I-II appears to be that they all relate to the special technical feature of methods of determining prognosis comprising detecting MN/CA9 gene expression products.

Art Unit: 1642

However, Bui et al (Clinical Cancer Research, 2/03, 9:802-811) teaches methods of determining prognosis comprising detecting MN/CA9 gene expression products (see Table 1, in particular).

Therefore, the technical feature linking the inventions of groups I-II does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Accordingly, groups I-II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.
